

Michal Rindos

I was born in Poprad - a town under our biggest mountains called the High Tatras (a part of Carpathian Basin). I started my work with butterflies as a child at the age of nine. I collected butterflies from our country. Two years later I started also breed them, focusing on two interesting families - Saturniidae and Sphingidae. Since 2008 I am studying general biology on the Comenius University in our capitol city of Bratislava in which I am focusing on the entomology. Primary topics of my current research are biodiversity, distribution and ecology of Lepidoptera (Papilionoidea, Sphingidae) and Hymenoptera (Ichneumonidae) and also relations between these two orders. I am sending also photo like a supp.
