

July 21-29, 2018

nationalmothweek.org

Join or host a mothing event with your friends, family or organization. It's easy and fun!

Help contribute to our knowledge of moths, their biodiversity and geographical distribution

Why moths?

- Moths are **among the most diverse and successful organisms** on Earth.
- Scientists estimate there are **150,000 to 500,000 moth species**.
- **Their colors and patterns are either dazzling or so cryptic** that they define camouflage. Moths can be as small as a pinhead or as large as an adult's hand.
- **Most moths are nocturnal**, but **some fly in daylight like butterflies**.
- **Finding moths** is as simple as leaving on a porch light after dark. Serious moth aficionados use special lights and baits to attract them.
